

PATRICK JENKINS

SOLUTIONS ARCHITECT — DATA CENTER BUILDOUTS

Alpharetta, GA · pat@patjenkins.com · linkedin.com/in/patrick-m-jenkins

PROFESSIONAL SUMMARY

Infrastructure and security engineer with 17 years operating large-scale enterprise infrastructure across AI data center operations, PKI, identity security, and cloud-native environments supporting mission-critical workloads. Hands-on across high-availability systems spanning hybrid cloud, on-premises data centers, and distributed infrastructure — F5 BIG-IP, AWS, Kubernetes (Venafi integration engagement), and API-driven automation to maximize business services. Track record of cutting operational risk through root-cause analysis, standardized runbooks, and discovery/placement governance, plus completed enterprise migrations including SHA-1 to SHA-2 across a 100+ F5 fleet at Oracle and an Entrust-to-Sectigo CA transition at Elevance. NVIDIA-certified in AI Infrastructure & Operations (NCA-AIO) and now focused on AI data center and infrastructure roles. Strong in security engineering and compliance alignment for Fortune 25-scale environments.

CORE COMPETENCIES

Data Center Operations & Hardware Bring-up | Enterprise PKI & Certificate Lifecycle Management | F5 BIG-IP & Network/Security Appliances | AI-Augmented Engineering (Claude, MCP, Replit) | Root-Cause Analysis & Escalation Engineering | Technical Documentation & Enablement | AI Infrastructure & Operations (NVIDIA NCA-AIO) | Conceptual fluency with declarative IaC (Ansible, CloudFormation, Terraform) | Security & Compliance Alignment (PCI DSS, NIST, FedRAMP)

PROFESSIONAL EXPERIENCE

CDW CORPORATION (CONSULTING) • REMOTE

August 2025 – June 2026

Venafi Engineer – Regional Banking Client

Advised a regional bank on Venafi Trust Protection Platform (TPP) architecture, certificate discovery topology, and placement-rule governance, delivering executive-level reporting and remediation strategy.

- Delivered a unified root-cause analysis that traced enterprise orphaned-certificate sprawl to a governance failure across 70+ uncoordinated scan scopes, paired with a risk-prioritized remediation roadmap for the client's PKI cleanup.
- Delivered a simplified scan-model and placement-rule pilot design to resolve attribution conflicts and clear orphaned-certificate records across the discovery estate.
- Designed an NMAP-first discovery methodology with targeted scan scoping, projected to cut scan runtime ~80% (12+ hours to 2–3).
- Designed the integration architecture for BIG-IQ–driven certificate automation (F5 BIG-IP/BIG-IQ APIs with CyberArk Machine Identity), defining issuance, renewal, and deployment workflows for virtual-server infrastructure.
- Produced an audit-ready PKI operations baseline — lifecycle runbooks, troubleshooting decision frameworks, and PowerShell validation procedures — to standardize engineering execution.

FixMyCert — fixmycert.com • ALPHARETTA, GA

December 2025 – Present

Founder & Operator — Independent Infrastructure & Education Platform

Built and operate FixMyCert solo — from a single interactive demo to 200+ pieces of content — on self-hosted MCP services on DigitalOcean behind a private Tailscale network, no team and no budget.

- Run an AI-augmented build-and-publish workflow (Claude, Replit, and self-hosted MCP services) that lets a single operator design, generate, and ship production-grade content end to end.
- Deployed Docker-based MCP infrastructure on DigitalOcean as the backend data layer for FixMyCert's PKI Compliance Hub, distributing compliance intelligence aligned with CA/Browser Forum, NIST, and PCI DSS standards.
- Delivered 200+ pieces of practical PKI content — 130+ guides, 50+ interactive demos, plus runbooks, checklists, and tools — spanning certificate lifecycle operations, troubleshooting, and compliance.

LUCID SERVICES GROUP (CONTRACT) • ALPHARETTA, GA

August 2024 – July 2025

PKI Engineer – Elevance Health (Fortune 25 Healthcare)

Diagnosed certificate provisioning failures during Change Management windows and enhanced Venafi PowerShell/REST API tooling for lifecycle inspection, troubleshooting, and validation.

- Sustained certificate lifecycle continuity at enterprise scale within a 600K-certificate hybrid PKI environment spanning Linux, AWS, F5, and DataPower.

- Standardized certificate-request formats across enterprise engineering teams by building a pre-provisioning documentation system (~20 artifacts), including 8–10 platform-specific intake templates for F5, IIS, DataPower, AWS, and legacy CloudFormation workflows.
- Maintained certificate trust-chain stability through the Entrust-to-Sectigo CA migration, resolving ~50 intermediate-CA remediation cases across distributed platforms while supporting affected Business Service teams.

MCKINSEY & COMPANY • ATLANTA, GA

June 2021 – February 2024

Senior Cloud Infrastructure Engineer – Device Identity

Owned Venafi TPP reliability across global device-identity infrastructure — upgrades, performance tuning, and security hardening — and integrated Kubernetes with Venafi for governed workload identity.

- Secured privileged credential governance by enforcing monthly rotation of the Venafi master admin account and implementing BeyondTrust-based automation workflows, later extended to high-risk service accounts such as SQL Server.
- Designed DigiCert API-driven certificate revocation workflows for emergency authentication-certificate invalidation on confiscated devices in the China region, while contributing inputs to SOC SOAR playbook development.
- Acted as primary resolution point for ~80% of firm-wide PKI incidents by applying structured triage and root-cause analysis to sustain continuous certificate lifecycle operations.

FISERV • ALPHARETTA, GA

April 2019 – June 2021

Senior Security Engineer – Data Protection

Compiled PCI compliance evidence across certificate inventory and infrastructure dependencies, and mentored engineers on certificate-lifecycle troubleshooting.

- Enhanced ServiceNow CMDB data integrity by introducing certificate-specific fields and CI relationship mappings, validated through controlled non-production testing cycles.
- Resolved enterprise Windows certificate and TLS incidents as escalation authority — IIS certificate request recovery, MMC Snap-In issues, and TLS protocol version mismatches in production.

ORACLE CORPORATION • RESTON, VA | ALPHARETTA, GA

June 2015 – March 2019

Senior Network Analyst

Supported F5 vulnerability management and RedSeal/FedRAMP STIG efforts, and standardized SSL certificate lifecycle and network-security documentation.

- Completed an enterprise-wide SSL certificate migration from SHA-1 to SHA-2 across distributed BIG-IP infrastructure, resolving certificate binding and assignment issues impacting production traffic.
- Led full lifecycle ownership of SSL/TLS certificate management across a 100+ F5 BIG-IP fleet supporting OPC business lines for continuity of application delivery and secure traffic routing.

EARLIER CAREER

Oracle Corporation • Ashburn, VA • Senior Systems Administrator (Federal & Civilian Cloud Hosting)

Oracle Corporation (via Taleo) • Metro Jacksonville, FL • Systems Administrator (SaaS Platform Operations)

TECHNICAL PROFICIENCIES

AI & Engineering Tooling: Claude (AI engineering assistant) | MCP Servers | DigitalOcean | Replit

Data Center & Infrastructure: Hardware Bring-up | Rack-and-Stack | Structured Cabling | Fiber Interconnects | InfiniBand Cabling (Exadata / Engineered Systems) | PDU Coordination | Line-card / Service-Module Replacement | Bare-Metal Deployments | Crash Cart Operations

Networking: F5 BIG-IP | SSL/TLS Offload | Cipher Suite Tuning | Juniper Firewalls | Cisco Switching | Network TAPs

Security & Compliance: McAfee | Qualys | Barracuda | RedSeal | FedRAMP | PCI DSS | STIG Compliance

Linux & Systems: Bare-metal Linux installation via crash cart (first-touch OS provisioning) | JVM Troubleshooting

Enterprise PKI & Certificate Mgmt: Venafi TPP | DigiCert API | CyberArk Certificate Manager | BeyondTrust | Entrust CA | Sectigo CA | Symantec Managed PKI | X.509 Lifecycle | SHA-1 to SHA-2 Migration

Automation & Scripting: REST APIs | Venafi REST API | PowerShell, Python, Bash — read, modify, and operate scripts in production | Source Control

EDUCATION & CERTIFICATIONS

Bachelor of General Studies in Computer Information Management — Jacksonville University, Jacksonville, FL

Certifications: NVIDIA NCA-AIIO (AI Infrastructure & Operations Associate) | CompTIA A+ | CompTIA Network+ | CompTIA IT Operations Specialist (CIOS)
